

French banks score capital victory against ECB

Reuters/Frankfurt

French banks won a landmark court victory against the European Central Bank yesterday, giving them an exemption from holding capital against customer deposits parked with a state-owned fund.

The European Union's top court annulled an ECB decision demanding that the six banks set aside capital against special deposits they have with state investment institution Caisse des Dépôts et Consignations (CDC).

The ruling marks the first high-profile success for banks in a case brought against the ECB since the central bank became the industry's main supervisor in 2014 under the lead of France's own former chief regulator, Daniele Nouy.

"The ECB has erred in law and committed manifest errors of assessment," the court said. The ruling will lower capital requirements for BNP Paribas, Societe Generale, Credit Agricole, Credit Mutuel, Groupe BPCE and La Banque Postale by billions of euros in total.

French tax-free savings accounts, such as the Livret A, were worth some €386bn at the end of May but their popularity is waning due to the low interest rate they pay.

Banks can deposit up to 60% of that cash with the Caisse des Dépôts et Consignation, which uses the funds to invest in public housing and other projects.

La Banque Postale and BPCE, which long had a monopoly on French regulated savings accounts, were likely the main beneficiaries of the verdict. Under EU rules, banks must hold capital worth at least 3% of their total assets.

By stripping out the deposits with the CDC, banks would get a higher leverage ratio for a given amount of capital.

La Banque Postale said in its annual report it had capital worth 4.5% of its assets at the end of 2017 but that ratio would come in at even healthier 5.3% if its deposits with the CDC had been excluded.

As the bank's assets were worth 205bn at the end of last year, according to its annual report, that 0.8% difference is worth €1.64bn (\$1.91bn).

BPCE and Credit Agricole SA knocked 30 and 15 basis points respectively off their leverage ratios in 2016 to take account of their deposits with the CDC.

The court accepted that these deposits qualify for an exemption because they are "deposits that the institution is legally obliged to transfer to (a) public sector entity...for the purposes of funding general interest investments".

In 2013, before moving to the ECB, Daniele Nouy herself said that French banks would be "strongly impacted" by new liquidity rules due to their exposure to regulated savings accounts, among other reasons.

The ECB is facing a number of lawsuits from banks that disagree with its decisions, including BNP Paribas.

Time to untie the ECB's hands

By Stefan Gerlach/Zurich

The European Central Bank's recent announcement that it will try to end asset purchases by this December means that it has confidence in its ability to achieve price stability.

But those who decided that price stability should be the ECB's single, overriding policy goal may have shot themselves in the foot, not least by denying policymakers much-needed flexibility.

The ECB defines price stability as inflation "below, but close to, 2% over the medium term." That is a lower inflation rate than even the Bundesbank achieved during its celebrated pre-euro history, and it is a tighter target than virtually all other central banks pursue.

For some, too much of a good thing is apparently wonderful.

To be sure, the ECB's definition of price stability was not a problem during the period between the global financial crisis and the adoption of quantitative easing, when inflation was well below 2%. To those who believed that monetary policy had been too tight, the ECB was right to do whatever it could to push inflation up toward the target range.

Yet for those in favor of the ECB's "stability-oriented monetary policy" – a term suggesting that others disregard the risk of monetary instability – the price-stability objective has evidently become too constraining.

From their perspective, asset purchases never should have happened, and interest rates should have been raised long ago, despite the eurozone's too-low rate of inflation.

It is safe to assume that those who hold this view were highly supportive of the ECB's hardline price-stability objective.

They would contend that low interest rates raise financial-stability risks that grow more acute with time.

That is probably true.

And yet it ignores the fact that raising interest rates prematurely can also fuel financial instability.

In any case, the argument is moot, because the ECB's mandate rules out any rate increase that could conflict with price stability.

Of course, those in favor of higher interest rates would counter that inflation of 1% or even less is in fact "close" to 2%, implying that price stability has been achieved and monetary policy can be tightened.

In other words, they do not share the view that "close to 2%" means something in the range of 1.7-1.9%. But this is a pernicious argument.

Running inflation below the level debtors had reason to expect translates into high real interest rates, which in turn risks triggering defaults among borrowers, including mortgagors, firms, and governments.

Undershooting the inflation target is also dangerous because inflation expectations and interest rates will decline over time, which makes it more likely that the ECB will reach the zero lower bound when the next downturn occurs.

It also increases the likelihood that asset purchases will become necessary once again.

Those in favor of a policy tightening would also note that low rates are problematic for savers, insurance companies, and pension funds, whose portfolios often include few equities.

But nowhere does the ECB's mandate say that monetary policy should be set in the interest of savers or the financial industry.

As a practical matter, the ECB's price-stability objective, originally designed to protect the eurozone from Italian-style inflation, has ended up protecting it from German-inspired deflation.

But just because the ECB's mandate has forced it to do the right thing on occasion does not mean that we will be so lucky in the future.

The global financial crisis required advanced economies' central banks to contend with circumstances that those who crafted their mandates scarcely could have imagined.

The fact that things often do not work out as expected is precisely why central banks' objectives should be written to give policymakers flexibility – or poetic license to bend the rules – when extreme events occur.

Otherwise, policymakers will be less effective than they otherwise could be.

Because the ECB's price-stability mandate is legally codified by the Treaty on the Functioning of the European Union, it cannot be altered without a treaty amendment.

But the phrase “below, but close to, 2%” is the ECB's own, and thus can be changed with the stroke of a pen.

As such, the ECB should consider two alterations.

First, it should get rid of the ambiguity inherent in the words “close to,” by setting a point target to provide clarity to the public – and to ECB Governing Council members – about what its monetary policy aims to achieve.

Whether that target is 1.8% or 2%, or whether it is surrounded by a range, is less important.

Second, the ECB must clarify how financial stability and business conditions factor into its policy decisions.

Many have argued that lengthening the policy horizon by precisely defining “the medium term” would give policymakers room to pursue other objectives temporarily.

After all, because financial crises and deep recessions are

deflationary, they, too, jeopardize price stability.
With the ECB finally exiting the last crisis, now is a good time to reflect on what lessons it has (or should have) learned.
The ECB must not delay in positioning itself for the next downturn. – Project Syndicate

Russia says may step up oil output to tackle deficit

MOSCOW (Reuters) – Russia and other leading oil producers may boost oil output further if supply shortages hit the global oil market, Russian Energy Minister Alexander Novak said on

Friday.

The expected drop in Iranian crude exports this year due to renewed U.S. sanctions, coupled with a decline in Venezuela's production and outages in Libya, Canada and the North Sea have driven oil prices to their highest since 2014 in recent weeks.

OPEC and other key producers including Russia responded to the tightness by easing a supply-cut agreement in June.

The deal effectively increases combined oil output by 1 million barrels per day (bpd), of which Russia's share stands at 200,000 bpd.

"If we need more than 1 million bpd, I don't rule out that we can quickly discuss it and make a quick decision," Novak told reporters, adding that the leading oil producers can get together and discuss the market situation at a teleconference.

He also said Russia may surpass the 200,000 level of increases if there is a need for it.

The International Energy Agency said on Thursday that there were already "very welcome" signs that output from leading producers had been boosted and may reach a record.

The global energy watchdog however said the disruptions underscored the pressure on global supplies as the world's spare production capacity cushion "might be stretched to the limit".

Novak said higher crude prices this year would add 2.5 trillion rubles (\$40.14 billion) to state coffers this year.

The minister also said that the war of tariffs between the United States and China have a negative impact on the global economy and boosted oil price volatility.

JP Morgan raises oil price outlook, but trims demand-growth forecast

(Reuters) – Investment bank JP Morgan on Friday raised its outlook for oil prices, but lowered its forecast for global crude demand-growth this year amid increasing uncertainty over international trade.

A gauge of global stock markets hovered at a month high while Wall Street traded near a five-month high as investors digested another significant day of corporate earnings.

The dollar index, which measures the greenback against a basket of six currencies, rose 0.18 percent, to 95.113 after rising as high 95.407. The euro was down 0.13 percent to

\$1.1644.

Demand increased after upbeat comments from Federal Reserve Chairman Jerome Powell about the U.S. economy in congressional testimony on Tuesday, a message he reiterated on Wednesday before a U.S. House panel.

“Strengthening economic growth and a confident Fed is helping to support the dollar,” said Alan Gayle, president of Via Nova Investment Management LLC in Fredericksburg, Virginia.

“Higher short-term interest rates make the dollar more attractive relative to other currencies.”

On Wall Street, the Dow Jones Industrial Average rose 57.03 points, or 0.23 percent, to 25,176.92, the S&P 500 gained 2.19 points, or 0.08 percent, to 2,811.74 and the Nasdaq Composite dropped 5.72 points, or 0.07 percent, to 7,849.39.

Morgan Stanley shares rose 2.8 percent after the bank’s better-than-expected profit.

The pan-European FTSEurofirst 300 index rose 0.60 percent, as shares of Swiss drugmaker Novartis and Sweden’s Ericsson gained after their reports.

MSCI’s gauge of stocks across the globe gained 0.08 percent, and touched its highest point in a month.

Benchmark U.S. 10-year notes last fell 1/32 in price to yield 2.8637 percent, from 2.862 percent late on Tuesday. The U.S. yield curve remained near its flattest in nearly 11 years.

Oil benchmark Brent crude hit a three-month low after government data showed a rise in U.S. crude inventories and oil production, which highlighted increasing global supply and concerns over weak demand.

U.S. crude fell 0.29 percent to \$67.88 per barrel and Brent was last at \$71.89, down 0.37 percent.

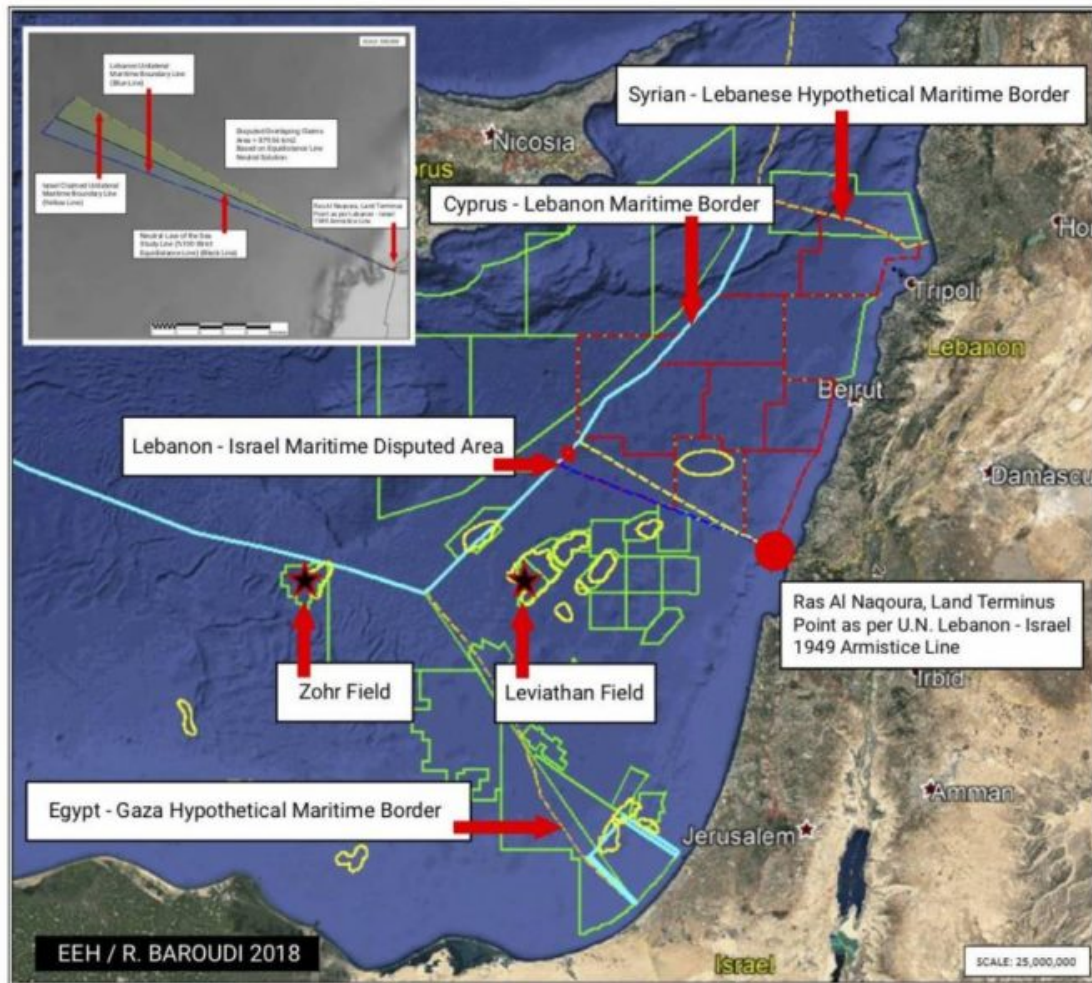

Gold, which is regarded as a hedge against inflation, extended its downtrend and sank to its lowest in a year on a buoyant dollar and falling oil prices.

“In this environment where we also see oil prices falling, and so less concern from investors about rising inflation, that’s another negative for the gold price,” said Jens Pedersen, senior analyst at Danske Bank in Copenhagen.

Spot gold was down 0.1 percent at \$1,226.23 an ounce.

**Lebanon-Israel maritime
dispute: Hundreds of billions
of reasons to negotiate**

Artistic/ Hypothetical Maritime Boundaries Lines (For Illustration Purposes Only)

DOHA: For months, Lebanon and Israel have been at a historic crossroads over how to settle their maritime boundary dispute.

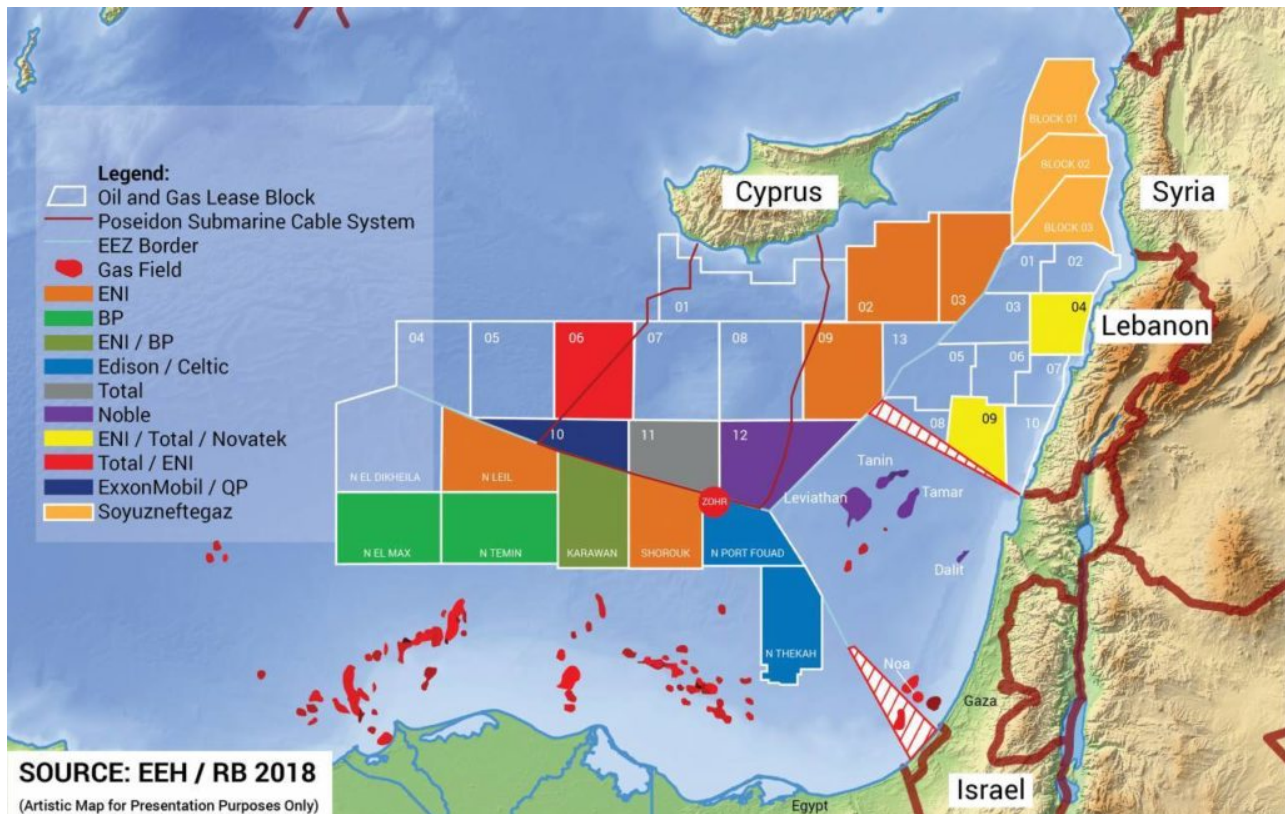

Although their competing claims concern a patch of water of less than 900 square kilometers, it is the potential reserves of oil and, especially, natural gas worth billions of dollars that are at the heart of the dispute.

Now both sides acknowledge that US-led efforts to settle the matter diplomatically are still underway. Given the fact that that the two sides do not have diplomatic relations and have been, legally speaking, at war since 1948, resolving this dispute was always going to be a challenge. But it is not impossible. Even if no direct talks can take place between the two countries, both international law, in general, and those associated with the United Nations, in particular, feature institutions, procedures, legal standards, and mechanisms that could help resolve the dispute.

In addition, if attempts to find a solution enjoy the active support and participation of the United States, the UN, and the international community in general, and if the parties are patient, there is a very real chance of success. Significantly, too, as members of the United Nations, both countries have shared obligations under the UN Charter to settle their disputes peacefully and to refrain from the threat or use of force.

Even more crucially, both countries share massive incentives to avoid any kind of action that threatens to upset the development of their respective energy sectors. It is true, as Israeli Energy Minister Yuval Steinitz said recently, that diplomatic negotiations could well delay exploration, delaying Israel's plans to expand its existing production of natural gas. The same applies for Lebanon's efforts to get its own energy sector off the ground. But this is insignificant, in the grand scheme of things, compared to the interruptions in gas exploration that could be expected to result from the outbreak of a shooting war, not to mention the direct and indirect costs – in blood and treasure alike – of such a conflict. All told, the drag on the economic prosperity of

both countries would outlast the fighting itself as foreign investors and qualified insurers would be spooked for years.

By contrast, if the parties successfully avoid conflict, both of them stand to reap enormous rewards. For Israel, the resolution of the dispute would free it to further expand an industry which is already supplying valuable fuel for power generation and other domestic needs, as well as exporting gas since commencing sales to Jordan earlier this year, and is now gearing up to implement the deal to provide Egypt with some USD 15 billion worth of gas over the next 10 years. This is because opening up the disputed area to exploration and production is likely to enlarge the size of Israel's gas reserves and revenues. And more importantly, the real prize of resolving the dispute would be an improved risk environment, which would boost the business and investment environments for all Israeli companies, not just energy ones.

For Lebanon, the potential significance of gas exploration and development starting sooner is even greater since none are yet underway. Almost as soon as production were to begin, the

national fuel bill would fall substantially, and the state-run Electricité du Liban (EDL) would be able to run some of its generating plants on gas, for which they were designed, rather than the more polluting, more expensive, and less efficient gas oil they currently use. Shortly thereafter, Lebanon's improved economic prospects – and the reduction in political risks – would lower the cost of credit and make it cheaper to repay its large debt. Eventually, some of the gas produced could even be exported, providing the Lebanese government with new revenues which, if properly managed and invested, could help fight poverty, improve education, infrastructure, and spark a historic socioeconomic rebirth.

For both sides, then, the best way forward is clearly the same: to get rid of the obstacles as quickly and as painlessly as possible, and then get down to business. Since this is a win-win situation, reaching an agreement would be relatively straightforward if we were talking about countries in other parts of the world. We are, however, talking about Lebanon and Israel and the region that surrounds them. And that makes reaching an agreement much more complicated.

This is because some of the obstacles to any sort of Libano-Israeli agreement are effectively insurmountable, at least for the foreseeable future. From this point of view, overcoming the inability to negotiate directly is the easy part as negotiations can be conducted through intermediaries. It will require considerably greater amounts of imagination and dexterity, though, to do so without disturbing the pillars upholding decades of Lebanese foreign policy.

One of these is Beirut's categorical refusal to recognize Israel because the latter was established at the expense of a brotherly people, namely the Palestinians. Even a Lebanese government inclined to bend on this issue, despite massive internal opposition, would never do so unilaterally for risk of being ostracized by the rest of the Arab world. Let's not forget that Egypt was shunned for a decade by its Arab League

partners for making a separate peace agreement with Israel. Tiny Lebanon would be even more vulnerable to such treatment. It is, in fact, Beirut's unambiguous stance on Israel which proves it is bona fide and guarantees it a seat in the club of Arab governments. It is proof that, despite having paid a high price compared to other front-line countries, Lebanon will not buckle in its commitment to support the Palestinians. It will not, cannot, and should not abandon that status for the sake of monetary gain.

In this regard, it is essential to keep in mind that Israel's foreign policy establishment views the extraction with some degree of acceptance, even if partial and/or informal, as an ever-present objective of any Israeli diplomatic interaction, even if indirect, with any Arab government. In fact, however, there also is a long history of Israeli officials leaking discrete contacts with Arab government officials without mutual consent, thereby embarrassing their interlocutors, erasing any progress achieved and poisoning the well for future dialogue.

Another obstacle to resolving the maritime dispute is that any solution will almost certainly require Cypriot agreement as its Exclusive Economic Zone (EEZ) abuts that of both countries. Cyprus has signed bilateral EEZ agreements with both countries, although Lebanon has never ratified its agreement with Cyprus. Here arises further complication, given that when Beirut and Nicosia signed their EEZ agreement in 2007, the Lebanese side sought to avoid having the document be viewed as de facto recognition of Israel. Accordingly, and in line with international law on maritime delimitation, the agreement did not define the tri-partite maritime border. Instead, it left the final point in the demarcation of the Cyprus/Lebanese border undefined, with the boundary demarcation coordinates starting at the now almost infamous "Point 1".

Unfortunately, the approach taken produced the opposite effect

because, in the Cyprus-Israel EEZ agreement of 2010, Point 1 was used as the starting point in the demarcation of the Cyprus/Israeli EEZ, even though it clearly should not have been. In this way, the buffer zone which the Lebanese/Cyprus EEZ agreement was meant to establish in order to prevent friction with Israel disappeared. An additional discrepancy on land – with Israel pushing its claim slightly north of the actual border – added to the overlap, but the vast majority is caused by Point 1, which lies some 11 nautical miles (18.5 kilometers) north of where the equidistant point (now known as “Point 23”) among the three countries would be drawn under the terms of Customary International Law (CIL) as set out in the United Nations Convention on the Law of the Sea (UNCLOS).

By agreeing to Point 1 being the starting point of its maritime boundary delimitation, Cyprus breached the express term in its agreement with Lebanon which required it “to notify and consult” Lebanon in case negotiations aimed at the delimitation of its EEZ with a “third country” concerned the demarcation points agreed with Lebanon. Moreover, by doing so, both Cyprus and Israel breached their obligations under UNCLOS and CIL, respectively, to refrain from actions that might prejudice Lebanon’s interests.

Lebanon protested against the terms of the Cyprus-Israel EEZ agreement, officially presenting its claims to the UN and seeking intervention from the Secretary-General and other UN bodies. However, since the Lebanese/Cypriot EEZ agreement never entered into force, arbitration under UNCLOS against Cyprus might be seen as undermining relations with a friendly government, and Israel is not a party to UNCLOS and no third party mechanism has been invoked by Lebanon in respect of this breach.

Commencing conciliation proceedings against Cyprus under UNCLOS seems a more promising route: in this scenario, a conciliation commission would be given twelve months to reach conclusions about the laws and facts of the case, and issue

recommendations to help Cyprus and Lebanon agree on a settlement. However, even assuming that the two countries were to accept such findings, the commission would not have the power to determine the tri-partite border and therefore the validity of Israel's claim to Point 1 being the starting point of the demarcation of the boundary of its EEZ with Cyprus and Lebanon. Given the express wording of the EEZ agreement it signed with Lebanon and its obligations under UNCLOS, it is not clear why Cyprus agreed to Point 1 as the starting point of its boundary demarcation with Israel.

However, the existence of these obstacles does not mean that dialogue is impossible, not when both sides stand to gain so much from a peaceful solution and to lose so much if an armed conflict were to break out, or even if the threat thereof were to persist.

In this respect, despite the contentious nature of its scope, the following provisions of the Israel-Cyprus EEZ agreement point to a way for dialogue to commence. First, Article 1 confirms that the Israel-Cyprus agreement is based on the same British Admiralty map referred to in both the unratified Lebanon-Cyprus EEZ agreement and the Cyprus/Egypt EEZ agreement. Second, Article 1(e) expressly acknowledges that the agreement is to be reviewed and modified if necessary to reach a tripartite agreement on EEZ delimitation among Israel, Lebanon, and Cyprus (even though the agreement does not refer to Lebanon by name). Finally, most supportive of Lebanon's claims is the fact that the preamble expressly refers to the provisions of UNCLOS concerning EEZ and the rules and principles of international law of the sea applicable to the EEZ as bases for drawing up the agreement, Article 1(e) refers to CIL principles concerning maritime delimitation and Article 1(b) and Article 1(c) refers to the median line being the basis on which the EEZ was delimited between Israel and Cyprus. These references by Israel to the provisions of UNCLOS regarding EEZ delimitation make it very hard for it to deny

that these provisions are principles of customary international law to which it is bound despite not being party to UNCLOS.

As such, from an international law perspective, the basis for the claims made by the two countries are not so far apart and there are mechanisms which have been adopted around the world in similar circumstances which could be invoked to resolve the dispute.

Since neither Lebanon nor Israel has accepted the compulsory jurisdiction of the International Court of Justice (ICJ) in The Hague, they would need to reach a special agreement to refer the maritime boundary dispute to it. And since Israel is not a party to UNCLOS, Lebanon cannot force Israel to resolve the maritime boundary dispute via third-party resolution pursuant to its provisions. At the same time, it is important to keep in mind that since the Mediterranean Sea is regarded as a semi-enclosed sea, pursuant to Part IX of UNCLOS (which is also considered part of CIL and as such binding on Israel), both countries are under an express obligation to cooperate in case of a disagreement.

A negotiated solution is within reach if both parties act in good faith, especially since both the Paulet-Newcombe Agreement of 1923 and the Armistice Agreement of 1949 provide clear border demarcation – and both the Lebanon-Cyprus and the Israel-Cyprus EEZ agreements allow for modification. If an EEZ boundary can be agreed, straddling reserves could be shared under the terms of a unitization agreement. If no agreement on delimitation is possible, the two countries could agree to declare the entire disputed area a joint development zone and enter into a joint development agreement along the lines of those adopted by Nigeria and Sao Tome and Principe, or Australia and East Timor, to develop such a zone. There are many models of such agreements which can be explored to find the best solution for this case.

Finally, it is important to note that Israel's objections to Lebanon having been awarded exploration rights in the "disputed area" are on very thin legal ice. In fact, under UNCLOS and the rules of CIL, Lebanon's only obligations are to cooperate to reach an agreement through a third party with Israel on the exploration and exploitation of straddling gas reserves; and to, in the absence of such an agreement, exercise restraint with respect to the unilateral exploitation of straddling reserves. Importantly, it has these obligations to the extent that a gas field can be exploited from both sides of the disputed border. Moreover, the obligation to exercise restraint does not apply to granting licenses to explore since no irreparable prejudice would be suffered by Israel by such exploration. Since it would seem that only 8 percent of Block 9 falls in the disputed area and that the actual gas field which Eni, NOVATEK, and TOTAL plan to explore falls outside the disputed area, by allowing such exploration to go ahead Lebanon is not breaching international law.

Despite being in a strong legal position, Lebanon has very little to lose – and everything to gain – by being tireless in seeking a negotiated solution, and the same applies to Israel. Going down the route of a joint development agreement would allow them both to agree to proceed with energy development without sacrificing their long-term interests.

The value of the energy in question has been estimated at more than USD 700 billion; that's almost three-quarters of a trillion reasons why a solution needs to be found. All Lebanese should want this because it promises, at the very least, to help alleviate so much of the economic/financial pressure that has been holding the whole country back for more than two decades. No opportunity should be lost to state Lebanon's claim loudly but reasonably, and no effort should be spared to reach an agreement.

Roudi Baroudi is the CEO of Energy and Environment Holding, an independent consultancy based in Doha, and a four decade veteran in the energy industry.

OPEC to Lose Effectiveness if Member-States Don't Respect Quotas – Tehran

MOSCOW (Sputnik) – Iranian Petroleum Minister Bijan Zangeneh sent on Monday a letter to President of the Organization of the Petroleum Exporting Countries (OPEC) Suhail Al Mazrouei to warn the cartel that it would lose its effectiveness if member states did not respect the established quotas on oil production.

“In my view, in case the OPEC Member Countries do not fully adhere to their commitments, the effectiveness of this Organization as the only developing countries’ intergovernmental organization with almost sixty years of history, will be gradually eroded, and the responsibility of this would lay with those Member Countries violating their commitments,” Zangeneh said in his letter, as quoted by the Shana news agency.

According to the minister, failure to meet the agreed quotas may turn into a routine practice. In view of this, Zangeneh called for reporting the extent of each country’s conformity to the agreement to the OPEC Conference.

In June, the OPEC states and other major oil producers fulfilled production cuts stipulated by the Vienna agreement by 124 percent, which was 36 percent lower than in May.

However, Saudi Arabia increased its oil output to 10.42 million barrels per day in June, while the quotas allow it to produce no more than 10.06 million barrels per day.

In November 2016, in Vienna, the world’s major oil producers agreed to reduce oil output by 1.8 million barrels per day from to October of the same year. The deal, aimed at boosting oil prices, was prolonged twice, with the last extension set to last until the end of 2018.

Why oil prices are suddenly tanking

Once red-hot, oil prices are suddenly tanking.

Rumors about emergency action from the Trump administration helped send US crude plunging 5% on Monday, sinking to as low as \$67.58 a barrel.

The reversal has wiped out 9% from oil price in less than a week. US oil closed at \$74.11 a barrel on July 10.

“It’s a great reminder of how quickly sentiment can swing – and how volatile these markets are,” said Michael Wittner, global head of oil research at Société Générale.

Analysts blamed Monday’s sell-off on reports suggesting Saudi Arabia and the United States are racing to prevent an oil shortage caused by President Donald Trump’s sanctions on Iran.

Late Friday, The Wall Street Journal reported that the Trump administration is considering a rare step: teaming up with other Western countries to simultaneously release oil

stockpiled for emergencies. Such a move isn't imminent and would only come if efforts to get OPEC to pump more fail to cool off prices, the paper reported.

The Energy Department, which released oil from the Strategic Petroleum Reserve last year after Hurricane Harvey, declined to comment on the news. The White House also declined to comment.

Related: The oil market's shock absorbers are nearly gone

Trump has repeatedly blasted OPEC for lofty oil prices and complained that prices are "too high." That's despite the fact that Trump's own tough stance on Iran, the world's fifth-largest oil producer, contributed to the price spike.

"Trump is attempting to jawbone the price of crude down. This goes back to the midterm elections," said Ben Cook, portfolio manager at BP Capital Fund Advisors.

Michael Tran, director of global energy strategy at RBC Capital Markets, doubts that tapping emergency oil stockpiles is necessary or would even work. He noted that refineries in the United States are already operating at "extremely high levels," leaving little room to turn more oil into gasoline.

"It would be relatively ineffective," said Tran.

Saudi Arabia-led OPEC and Russia agreed last month to pump more oil, but their move failed to cool off prices. In fact, oil bulls argued that unleashing more oil now will leave Saudi Arabia with little firepower to respond to future shortages.

Related: Trade war threatens America's booming oil exports

Another factor behind Monday's drop is a Bloomberg News report that Saudi Arabia is offering extra crude oil on top of its contractual supplies to some buyers in Asia. That suggests that Saudi Arabia is taking aggressive steps to keep oil prices from getting too high.

“They’re letting buyers know: If you want more crude from us, we have it,” said Wittner.

Meanwhile, there are signs that at least one of OPEC’s hobbled members is on the rebound. Last week, oil prices plunged after Libya’s national oil company announced it had regained control of multiple ports, enabling it to resume exports. Disruptions in Libya and Venezuela have been instrumental in lifting prices to their highest levels in nearly four years.

“We’re getting hints here that barrels are available and aren’t in the short supply that we thought,” said BP Capital’s Cook.

Iran warns OPEC, Saudi on violating output-cap agreement

Addressing Al Mazrouei, Zanganeh warned that any violation of

OPEC's oil production ceiling will hurt the effectiveness of the organization, Shana news agency reported on Monday.

Urging strict adherence to the agreed caps, the Iranian minister noted that some member countries have produced "far above" their original commitment in June and violated the agreement.

Zanganeh further stressed the role of the Joint OPEC-Non-OPEC Ministerial Monitoring Committee (JMMC), saying that JMMC should monitor and report the conformity level of the members.

JMMC can't interpret OPEC's decisions

In his letter to Khalid al-Falih, Zanganeh stressed that JMMC doesn't have the right to interpret the organization's decision which was made during the 174th meeting.

He further noted that last month's OPEC supply pact does not give member countries the right to raise oil production above their targets.

"Member countries committed themselves to reach a production adjustment conformity level of 100 percent, as of July 1, 2018," Zanganeh stated.

"This decision neither warrants member countries the right to exceed their production level above the allocated production level decided, nor the right to redistribute the unfulfilled production adjustment commitments among member countries."

EF/MA

Fitch Economist Blows Lid off US' Dependence on Russian Oil

Russia doesn't view the US as a potential key purchaser of the its oil, while Washington has expressed a keen interest in putting a damper on exorbitant oil prices by pushing OPEC to boost its output, which seems especially relevant ahead of the US midterm elections.

The US purchases approximately 8 billion dollars' worth of Russian oil, which is about 3 percent of Russia's total production, Dmitry Marinichenko, head of natural resources and raw materials group at the rating agency Fitch, told Sputnik.

"As of today, the US buys roughly 300,000 barrels of oil from Russia daily, while the amount drastically varies from month to month," he said, noting that it is currently just "a drop in the bucket," meeting just about 2-3 percent of US' need for oil imports and accounting for less than 3 percent of Russia's overall oil production," said Marinichenko.

According to the economist, the American market can't be billed as a priority for Russia, whereas the major destination of Russian oil flow has recently become China.

"So, it's hardly possible to speak about any new trends with this regard," he remarked.

On July 16, it emerged that the US is floating the possibility of a dip into its emergency oil reserves if the prospective global oil output is not sufficient to propel prices down, with the suggestion coming in the run-up to the US midterm elections slated for November 6.

Late last month, OPEC and its partners, led by Russia, agreed to ramp up oil production by about one million barrels per day, or one percent of global supply, with the US exerting pressure on them in a bid to put an end to the high oil prices. OPEC's plan, however, comes amid speculation about the future of the oil market at large, with Iran being squeezed away from it by the US. In June, Washington threatened to slap penalties on countries that fail to curb oil trade with Iran by November 4.

Opec+ oil production boost to reassure market investors: EIU

The 1mn barrels per day production boost by Opec and its allies will help to reassure market investors and prevent a spike in oil prices in the near term, Economist Intelligence Unit (EIU) has said in a report.

This would be equivalent to about 1% of global supply, EIU noted. Nonetheless, EIU said a "number of geopolitical risks remain", including the potential for further output declines from Iran and Venezuela, which will push oil prices gradually higher over the remainder of 2018.

"The fundamental problem facing Opec at its ministerial

meeting in Vienna on June 22 was that some of its members do not have the capacity to rapidly increase output even if quota caps are relaxed, given problems related to under-investment and politics,” EIU said. “This means that they would suffer revenue hit from lower prices without a counterbalancing increase in volume,” EIU said. Venezuela’s output in May was just 1.4mn bpd, its lowest in 30 years, as domestic political and economic turmoil has undermined the oil sector.

This, EIU said was down from 2.1mn bpd in October 2016, making the reduction more than seven times greater than its obligation under the Opec deal, which is also described as more than 700% “compliance” with its cut target. Angola, meanwhile, has struggled owing to underinvestment since the collapse in oil prices in 2015, meaning that it produced just 1.5mn bpd in May, equivalent to a 290% compliance rate. “Despite the differences in production capacity, all members do fundamentally benefit from an environment in which prices are more stable and avoid another dramatic crash driven by a shale boom. As a result, they were able to achieve an agreement, firstly among the Opec countries and then on June 23 with their non-Opec partners,” EIU said.

In November 2016 Opec and major non-Opec exporters, particularly Russia made a decision to cut nearly 1.8mn barrels per day (bpd) from supply. This had a dramatic impact on the oil market, particularly from mid 2017 after compliance began to improve, and the deal was twice extended, first until March 2018 and then until December. A pick-up in the global economy, boosting demand, and problems with some producers, notably Venezuela, which saw them producing below their Opec quota, added to the upward pressure on oil prices, which rallied by more than 50%, hitting a four year high of \$79/barrel in May, a level which had seemed almost inconceivable back in 2016, when prices averaged just \$44/b.

“However, the success of the deal in bolstering prices stoked

complaints from oil consumers – notably the US president, Donald Trump – and added to worries of a repeat of the previous crash, as high prices motivate investment in new capacity outside the exporter bloc, particularly in US shale. “This all led to a growing consensus that the exporters need to release more oil to put a ceiling on prices,” EIU said.
