Fiat Chrysler said to pay more than \$700mn over US diesel emissions claims

FIAT CHRYSLER AUTOMOBILES Reuters Washington

Fiat Chrysler Automobiles NV will pay more than \$700mn to resolve lawsuits from the US Justice De- partment and diesel owners over claims it used illegal software to allow 104,000 diesel vehicles to emit excess emissions, three people briefed on the matter said on Wednesday. Fiat Chrysler will pay \$311mn in civil penalties to US and California regula- tors, about \$75mn to states investigating the excess emissions and additional funds to off set excess emissions from the older cars. It will also pay \$280mn to settle a law- suit by owners, the sources said. Fiat Chrysler has denied any wrongdo- ing and previously said there was never an attempt to create software to cheat emis- sions rules. In October, the company set aside €713mn (\$815mn) to cover potential costs related to the case. Separately, Robert Bosch GmbH, a German auto supplier that made some components for the Fiat Chrysler diesel engines, is expected to announce it will settle suits from US owners for \$30mn, one person said. The settlements are set to be an- nounced on Thursday at the Justice De- partment. Fiat Chrysler, Bosch and the Justice De- partment declined to

comment. The Environmental Protection Agency issued a media advisory on Wednesday that said it would make an "announcement of a signifi cant civil action to ad- dress cheating on federal auto-emissions tests." The Justice Department sued Fiat Chrysler in May 2017, accusing it of il- legally using software that led to excess emissions in 104,000 US diesel vehicles from the 2014-2016 model years. Fiat Chrysler won approval from US regulators in July 2017 to sell diesel vehicles with updated software. The company has repeatedly said it hoped to use that software to address agencies' concerns over the 2014-2016 vehicles. The company is not expected to make any hardware changes to the vehicles and the fi x will not impact the vehicle's fuel economy, two people said. Owners of those vehicles are expected to get an average of \$2,800 each for com- pleting the software updates, the sources said. Fiat Chrysler will formally issue an emissions recall for the vehicles, but will not off er to buy back the vehicles, the sources said. The Justice Department in 2017 said Fiat Chrysler used auxiliary emissions controls in diesel vehicles that led to "substantially" higher than allowable levels of nitrogen oxide, or NOx pollution, which is linked to smog formation and respiratory problems. US and California regulators stepped up scrutiny of diesel vehicles after Volkswa- gen AG admitted in 2015 to illegally in- stalling software in US vehicles for years to evade emissions standards. VW has agreed to pay more than \$25bn in the United States for claims from own- ers, environmental regulators, states and dealers. Regulators have also been probing die- sel emissions in Daimler AG's US Mer- cedes Benz vehicles.
