

Qatar sees 'very big demand' for North Field expansion gas: Al-Kaabi

HE the Minister of State for Energy Affairs Saad bin Sherida al-Kaabi said Qatar potentially will run out of gas for supplies from the North Field expansion by the year-end, because of “very big demand” for long-term contracts.

“We have signed a large contract with China. We have other deals that we are working on. With so many deals lining up, we will potentially run out of gas from the North Field – both North Field East and North Field South. There is very big demand. Additional gas from the North Field will be available by 2026; all contracts have been awarded,” al-Kaabi said at a ministerial session at the Qatar Economic Forum Powered by Bloomberg in Doha Tuesday.

The expansion project will increase Qatar’s liquefied natural gas (LNG) production capacity from 77mn tonnes per year (MTPY)

to 126 MTPY, through the North Field East (NFE) and North Field South (NFS) expansion projects, with first LNG expected by 2026.

Qatar will add 65mn tonnes per year of LNG to meet the growing needs of the world from its North Field expansion and its project in the United States, al-Kaabi said.

“We don’t follow what others say we should do...we do what is technically possible with our fields. When it’s the right time and technically we can do it, we’ll definitely do more,” the minister said.

Talking about the gas supply and demand situation in future, al-Kaabi said, “There is going to be a shortage in oil and gas in future, predominantly due to the push on (energy) transition. It is really aggressive without studying it. If you look at economic and environment stability, these are not mutually exclusive... we have to have both.

“And if you push some countries into doing that, that doesn’t help humanity in general. The only thing that saved humanity and Europe this year was a warm winter and the slowdown in the economy worldwide. If the economy comes back in 2024, the worst is yet to come,” said al-Kaabi.

“If you look at future, whether it is oil or gas, because of decade-long lack of investments, due to the push to transition of energy, there is going to be shortage for both.”

Al-Kaabi emphasised the need to have a “mix” of all energy resources and said, “You need a mix of all energy sources and people need to realise that you need oil, gas and renewables. People talk about renewables as if it’s a fix-all.

“If you look at renewables you can generate electricity from wind and solar, but you can’t make plastics or any sort of such products. So by saying renewables generate electricity does not solve the problem, you need a proper energy mix. And it can’t be driven by politics and politicians wanting to get in the seat to say this is the solution. It’s a nice pitch to say energy transition, but when you dig down and look at the reality, it’s not achievable.”

Al-Kaabi said he was “thrilled” that the G7 final communique

spoke about the need for more LNG for the world and warned the world would face a shortage of oil and gas due to a lack of investment.

“I am thrilled that finally the G7 in their final communique said they need more LNG to be supplied to the world. We’ve been saying this for the last 10 years,” al-Kaabi noted.
