

Biden's green push gives Detroit the cover to go electric

General Motors CEO Mary Barra just stomped on the electric-vehicle accelerator pedal. Call it the Biden effect.

Six months ago the automaker backed the Trump administration in a legal battle that could have neutered California's longstanding right to set its own tougher carbon-emission rules. About two weeks after Trump lost, GM withdrew from that fight and two weeks after he left office, it pledged to match the state's mandate to sell only electric vehicles starting in 2035 – and do that all across the U.S.

Why the 180? Barra is getting a jump on President Joe Biden's policies, which are expected to help GM and its rivals build and sell more EVs in the U.S. He wants to restore the \$7,500 tax incentives that companies including GM and Tesla Inc. exhausted under Trump's watch, and Biden plans to build 500,000 charging stations across the country. That could make

EVs more affordable and ease concerns of would-be buyers about battery-powered cars' driving range.

Some see GM's about-face on the politics of clean cars as less a calculated policy move than a recognition of longer-term global forces at work.

"They would not make an announcement this substantial just for political purposes," said Joe Britton, executive director of the Zero Emission Transportation Association, a Washington-based lobby group pushing for full adoption of EVs by 2030. "This is a clear sign that electric vehicles are going to be the future and that we're in a bull market for innovation right now."

Believe it or not, Biden's position has been met with a collective sigh of relief in some quarters of Detroit. The rest of the world is moving toward electric vehicles, and the Trump administration had no interest in easing that transition in the U.S.

While Trump was trying to prolong the era of combustion engines by watering down clean-air rules and resisting efforts to expand the EV tax credit, China's government has adopted rules and incentives that boosted EV sales in the world's largest car market. Almost all of the European Union's 27 member states have purchase or tax incentives for consumers who buy electric vehicles, and it's rapidly ratcheting up emission restrictions to penalize automakers that don't sell enough EVs in Europe.

As a result, China and the EU have jumped way ahead of the U.S. in EV adoption rates. Last year, of the 3.2 million EVs sold globally, 1.3 million were in China and 1.2 million were in the European Union and UK. The U.S. accounted for just 328,000 sales, according to Swedish researcher EV Volumes.com.

That put Detroit's carmakers in a spot. They get most of their revenue and profits at home in the U.S., where EV sales have

been minimal. And they need help with economies of scale sufficient to drive down battery costs and create profit margins.

Barra had been heading in this direction since 2017, when GM announced plans to build 20 different EVs by 2023, but most of them were bound for the Chinese market. GM accelerated that shift in November, promising **30 models by 2025 and an investment of \$27 billion** in electric and self-driving cars with more models planned for the U.S. Ford Motor Co. has been stepping up its efforts as well, budgeting \$11 billion for EVs and more fuel-efficient vehicles.

Biden's victory put some wind at the auto industry's back and makes the commitment to electric powertrains more palatable for their risk-averse corporate cultures.

Political convenience

Even so, there also is a hefty dose of political convenience involved in the decision to go all-in on EVs. GM, Toyota Motor Corp. and Fiat Chrysler Automobiles – now a part of Stellantis – went along with Trump in his legal fight with California, throwing a bone to a temperamental president and thereby extending their ability to churn out cash-cow gasoline-powered vehicles.

Officially, GM said it always wanted one national standard instead of different rules from Washington and Sacramento. It just so happens that the company picked Trump's watered-down option.

Critics of government subsidies were quick to see GM's move as a sign the market for EVs is maturing fast enough that no additional incentives are needed.

"GM is a publicly traded business and is making a strategic, calculated market decision," Tom Pyle, a former Trump adviser and current president of American Energy Alliance, a free-

market advocacy group, said in a statement. “In no way should any taxpayer be responsible for GM’s ability to achieve – or fail to achieve – their corporate goal of an all-electric light duty fleet by 2035.”

Big companies have long sought to position themselves in the most favorable light in Washington, regardless of which party’s candidate is in the Oval Office. Automakers are no exception. Former Ford CEO Mark Fields warned then-President Trump that overly tough mileage rules would put a million jobs at risk, a prelude to Trump’s rollback. And GM broadly touted its Chevrolet Volt plug-in after its 2009 rescue by the Obama administration, which later set a goal of putting a million electric vehicles on the road by 2015.

Carrot and stick

Trump and his Twitter account are now silenced. With Democrats running the White House and having a majority in both chambers of Congress, the prevailing wind is definitely blowing against Detroit’s status quo dependency on big sport-utility vehicles and trucks.

Biden’s plan also comes with a stick. Earlier this week, he vowed to reinstate vehicle emissions standards gutted by the Trump administration and set “new, ambitious ones that our workers are ready to meet.”

Doing so would aid GM’s electrification push and could encourage competitors to follow suit, said Joshua Linn, a senior fellow at Resources for the Future, a Washington think tank that focuses on environmental policy and economics.

“Companies don’t want to get out too far ahead of the market,” he said. “Having more ambitious policies, greenhouse-gas standards and maybe a national zero-emission vehicle program will help support the entire market moving in that direction.”

GM’s worst nightmare is a scenario in which its commitment to

EVs isn't met with higher consumer demand, allowing rivals with less ambitious electrification plans to steal away business. Biden may be giving GM some of the cover it needs to proceed.

GECF commences educational campaign on benefits of natural gas

The Gas Exporting Countries Forum (GECF) has activated a new communication campaign on its social media channels that raises awareness about the benefits of natural gas as well as simplifies the facts of an industry often perceived as data heavy.

Being run on GECF's Twitter and LinkedIn channels, the 'Did You Know...?' series of posts provide easy-to-understand facts, figures, and data on an energy source that likely powers the

batteries of the phones users will read the information on. It also calls to attention any misconception around this important source of energy found in abundance in pockets around the world.

“In the midst of an ‘infodemic’ it is increasingly hard to differentiate facts from the noise. Further, due to the complexity of energy systems, end-users rarely get to glimpse at the processes that eventually power most aspects of their daily lives, such as electricity at home, prospects for front-running technologies, fuelling of vehicles and so on,” said GECF secretary general Yury Sentyurin.

Scientifically-grounded data and insights are championed at the GECF, which was established to bring a better understanding about technology that underpins the full spectrum of energy areas, to promote natural gas as the fuel of choice, as well as to promote cooperation at all levels of global energy system.

The forum recently entered a landmark MoU with Unesco to further enhance its role in environmental protection and to cultivate a “culture of energy responsible behaviour”.

“Our campaign’s goal is to de-mystify the world of energy and, really, democratise it for every one’s understanding. Today, as we live in times of rising appetite for energy, ever-increasing struggle for climate protection and better future for all, social media has become a tool in global geopolitics. The ‘Did You Know...?’ campaign aims to empower the community around the world with a new appreciation and understanding about an element that holds such a powerful impact on people’s quality of life,” the forum’s representative noted.

According to the latest available projections, quantified through the use of unique and highly granular GECF Global Gas Model, fossil fuels will maintain a leading role in the global energy mix, accounting for at least 71% in 2050 (against 81% in 2019) of the world’s energy need.

Meanwhile, natural gas will be the only hydrocarbon resource to increase its share from 23% today to 28% in 2050.

“Natural gas is often lumped together with other traditional

fuels due to its origins as a hydrocarbon fuel without recognising the attributes that distinguish it for its low-emissions and dynamic flexibility. As a platform dedicated to promoting the use of this cleanest of the fossil fuels, we felt it is important to broaden people's understanding of its economic and environmental advantages," Sentryurin emphasised. To follow the 'Did You Know...?' campaign, visit the GECF website www.gecf.org, Twitter @GECF_News, and GECF LinkedIn page.

Worsening pandemic poses 'serious risks', says Lagarde

European Central Bank chief Christine Lagarde warned yesterday that the pandemic still poses "serious risks" to the eurozone economy as concerns grow about new virus variants and sluggish vaccination campaigns.

The Frankfurt institution's governing council held back from tweaking its ultra-loose monetary policy at its first meeting of the year, having already topped up support in December. Lagarde stressed that "ample monetary stimulus" remained essential to steer the 19-nation currency club through the Covid-19 upheaval, and that the ECB stood ready to do more as needed.

"The pandemic continues to pose serious risks to public health and to the euro area and global economies," Lagarde told an online press conference.

The start of mass vaccination drives in the European Union was "an important milestone", she said, but the rollout has got off to a bumpy start in many nations.

The emergence of more contagious virus variants, first discovered in Britain and South Africa, has added to

nervousness at a time when many countries are already struggling to bring down infection numbers.

Europe's top economy Germany this week extended its partial lockdown until February 14, and Chancellor Angela Merkel has not ruled out border checks to slow the spread of the new strains.

France and Spain have tightened their evening curfews, while non-essential shops and leisure facilities are closed across much of the continent.

The latest virus setbacks "are disrupting economic activity," Lagarde said, noting that the services sector was hit especially hard.

"The intensification of pandemic poses some downside risks to the short-term economic outlook," she added.

The ECB in December forecast 3.9% growth for 2021, after an estimated contraction of 7.3% in 2020.

Lagarde said the ECB's forecasts "remain valid" for now, as they took into account lockdowns persisting through the first quarter coupled with a gradual start to vaccinations.

The former French finance minister also reiterated her plea for European governments to support the ECB's efforts through fiscal policy.

She urged European Union members to speed up the ratification of a recently agreed €750bn recovery fund, saying it had a "key role" to play in financing the region's bounce-back.

Under Lagarde, the ECB took unprecedented steps last year to cushion the impact of Covid-19 on the euro economy.

Its biggest weapon is a pandemic emergency bond-buying scheme, known as PEPP, that was in December topped up by €500bn to reach a total envelope of €1.85tn.

The scheme was also extended to March 2022.

The bank has also offered ultra-cheap bank loans and held interest rates at historic lows.

The goal of the measures is to keep borrowing costs low to encourage spending and investment in the 19-nation currency club, in a bid to boost growth and inflation.

But eurozone inflation has stayed stubbornly low for years and

even turned negative in 2020.

By the ECB's own estimates, price growth will gradually inch up to 1.4% by 2023, still far off the bank's target of just under 2%.

In December, inflation stood at minus 0.3%.

Analysts say inflation could bound higher later this year, powered by pent-up consumer demand once lockdowns start easing.

But any boost is expected to be short-lived, they caution.

Lagarde agreed that inflation was "likely to increase in the coming months", partly also due to the end of a temporary sales tax cut in Germany from January.

But she said "underlying price pressures are expected to remain subdued due to low demand in tourism and travel sectors, and the appreciation of the euro against the dollar."

The euro has risen by more than 10% against the greenback since late February, complicating ECB efforts to push up inflation.

A stronger euro makes imports cheaper, keeping a lid on consumer prices, while exports become less competitive, hurting growth prospects.

Lagarde said the governing council was monitoring exchange rates "very carefully". For now, the ECB "remains happy at the sidelines and has kept all options open," said ING bank economist Carsten Brzeski.

"In the absence of any severe economic accident, the ECB is likely to stick to this line at least until late summer," he added.

Qatar's growth helps maintain

GECF's status as largest coalition of global LNG supplier: Sentyurin

Wind Generation in Europe Rises to Record in 2020

Total quits US oil lobby over climate policies

Reuters /London

Total yesterday became the first major energy company to quit the main US oil and gas lobby due to disagreements over its climate policies and support for easing drilling regulations.

Total said it would not renew its 2021 membership with the American Petroleum Institute (API) following a review of the lobby's climate positions, describing them as being only "partially aligned" with Total's.

Its withdrawal from the century-old API comes ahead of a sweeping change in policy direction in the United States, with incoming President Joe Biden promising to tackle climate change and bring the country to net-zero emissions by 2050.

The points of difference include API's support for the rollback of US regulation on emissions of methane, a potent greenhouse gas, for oil and gas drillers as well as on how to assign a price to carbon, seen as a critical method to curb emissions.

"As part of our Climate Ambition made public in May 2020, we are committed to ensuring, in a transparent manner, that the industry associations of which we are a member adopt positions and messages that are aligned with those of the Group in the fight against climate change", Total chief executive Patrick Pouyanné said.

In a statement, the API thanked Total for its membership.

"We believe that the world's energy and environmental challenges are large enough that many different approaches are necessary to solve them, and we benefit from a diversity of views," the API said.

Total's operations in the United States include a number of offshore oil and gas fields in the Gulf of Mexico, a major refining and petrochemical plant in Port Arthur, Texas as well as renewable energy businesses.

Total last year announced plans to cut its carbon emissions, with the aim of reaching net zero emissions from its operations and its energy products sold to customers in Europe by 2050 or sooner.

Europe's top energy companies, including BP and Royal Dutch Shell, have outlined plans to curb emissions and boost renewable energy output following years of growing investor pressure.

Total, BP and Shell have already pulled out of the American Fuel & Petrochemical Manufacturers, a US oil refining group, also due to differences over climate policies.

They also said they would regularly review their alignment over climate with industry associations but until Friday those companies had elected to remain in API, the primary trade group for the oil and gas industry.

BP last year decided to remain in the API even though it was only partially aligned with the lobby.

Andrew Logan, director for oil and gas programmes and clean energy investor group CERES, said the announcement was significant and would put pressure on other European oil majors.

"Given the size and influence of API, this is a much more significant move than previous decisions to pull out of more niche trade groups like AFPM.

I think that we will see other companies follow suit," Logan said.

Senate shift paves way for straight-talking US climate reforms

LONDON: Democratic Senate seat wins in the state of Georgia have given US President-elect Joe Biden a “green light to move forward” on some key shifts in national climate policy, such as much greener pandemic stimulus spending, US policy analysts said.

With Democrats now in control of the Senate, “it’s a huge, huge difference”, Nigel Purvis, CEO of the Washington-based Climate Advisers policy group, told the Thomson Reuters Foundation.

“This almost doubles what he can do – he has a whole additional range of tools and levers at his disposal,” said Purvis, who has worked with three former US administrations on climate policy.

Biden has proposed a \$2-trillion, climate-smart economic stimulus plan, for instance, which he would not have been able to get through if the Georgia election had turned out differently. “Now he has a real chance,” Purvis added. Biden’s thin Senate majority means he is unlikely to be able to pass a single comprehensive climate change bill, which would require

the approval of 60 per cent of senators.

But many measures related to raising or spending money – including stimulus funding for things like electric vehicle infrastructure, or incentives for farmers to sequester more carbon – can win approval with a simple majority.

Biden should, for instance, now be able to back his plans to mainstream climate action into all government agencies with cash to make that possible, said Christina DeConcini, director of government affairs at the World Resources Institute (WRI).

“There are limits for sure, but it’s ... a green light to move forward,” she said. “I really think this is a new day for climate in the United States.”

Talking jobs

How shifts in climate policy are framed for a country politically divided on the issue will be crucial to Biden’s success in bringing change, the analysts said.

Gina McCarthy, former administrator of the Environmental Protection Agency under President Barack Obama and Biden’s nominee to become the first national climate adviser, for instance, speaks more about the need for a “cleaner, stronger, more resilient economy” than about climate change.

“We know clean energy supports millions of jobs in the United States and it can support millions more,” as well as saving money and improving people’s health, she told an online event in November.

To get people behind climate action, governments “need to give citizens and communities a better life today” – not just promises that future catastrophes will be avoided, she added.

Rachel Kyte, a former UN special representative on energy and dean of the Fletcher School for Law and Diplomacy at Tufts University in Massachusetts, said McCarthy and other Biden

cabinet picks excel at talking about the need for climate-friendly reforms “in language ordinary people can understand”.

“They will find a very main-street narrative for why these are common-sense policies” – and that could galvanize broader bipartisan support, she predicted.

Alden Meyer, a strategic adviser with independent climate change think-tank E3G, noted that during the last fiscal crisis in 2009, the Obama-Biden administration crafted a stimulus package that included \$90 billion for clean energy technology.

Biden’s pick for energy secretary, former Michigan governor Jennifer Granholm, in that crisis helped negotiate a rescue of the US auto industry that included an agreement by Detroit to adopt much more aggressive fuel economy standards.

Such “green strings” on stimulus cash will be needed to help drive effective climate action in the United States and globally, climate analysts say.

“This is not new territory for Biden,” Meyer said. “He knows this game very well. He gets this, he feels this in his bones.”

Pressure from the left

Another challenge for Biden, the analysts said, will be keeping onboard factions of the Democratic Party – such as the youth-led Sunset Movement – that are demanding swift, immediate and aggressive action on climate threats.

The Sunrise Movement has already told Democratic Senate leaders it expects “an enormous green spending bill on day one”, Kyte said – and that desire for rapid change may be at odds with efforts to sell climate action to a broader US audience.

Yet, despite paralysing political polarisation on many

climate-related issues, a few hints of possible bipartisan compromise have emerged in recent months, the analysts said.

Stimulus and relief packages passed in December included policies that could help set the stage for decarbonisation of the US economy, such as tax incentives for clean energy and carbon capture technologies.

Congress also agreed, with bipartisan support, to phase out hydrofluorocarbons (HFCs), powerful climate pollutants used in air-conditioning and refrigeration equipment.

As well, a Democrat-controlled US Congress is likely to work more closely with the cities, states and other bodies that have driven US climate action during global-warming skeptic President Donald Trump's administration, said WRI's DeConcini.

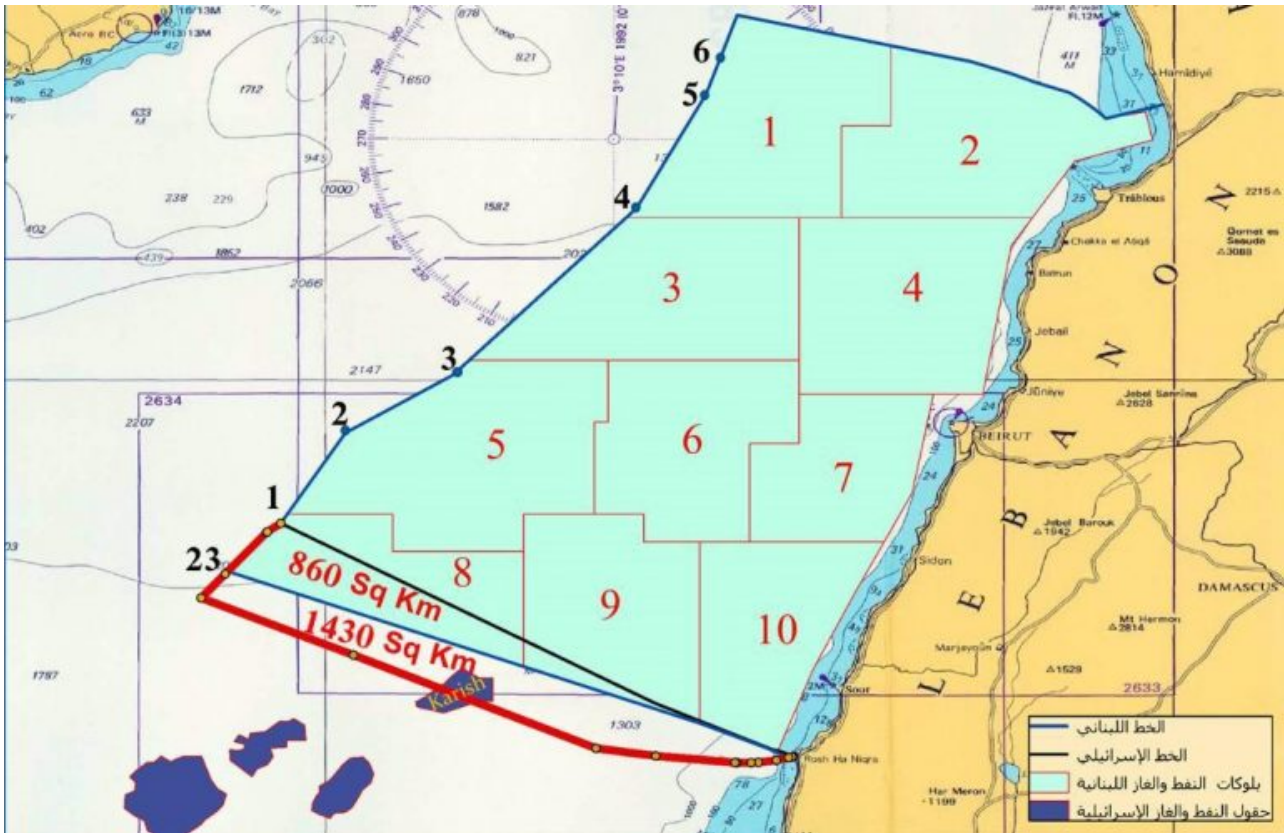

US businesses – a growing number of which have adopted net-zero emissions goals, or are having to adhere to tougher climate policies in other countries where they work – also increasingly want consistent, clear climate policy, she said.

“At some point, the desire to just stay the course – because they see the future on the wall and because it's good for their bottom line – will become so strong it will provide the political momentum for the U.S. to move toward a decarbonized economy,” she predicted.

الجيش اللبناني إمّسا مفوضا

بالترسيم .. أو فليسحبوا تفويضهم

الخطوط البحرية التي يتم التفاوض حولها

UKHO Map presented by John Brown to Lebanese Government in 2011

إستبشر اللبنانيون خيرًا بإنتلاق المفاوضات الحدودية البحرية غير المباشرة مع العدو الإسرائيلي بوساطة أميركية وبرعاية الأمم المتحدة، كون المهمة سلّمت لجيشهم الوطني الذي يثقون به ويعتبرونه المؤسسة الأكثر قدرة على استعادة الحقوق الوطنية التي قد تساهم في إنتشال لبنان من أزمته المالية الخانقة.

خاض الوفد اللبناني الجولات الأربع بكفاءة عالية برغم النيران الصديقة التي تعرّض لها قبل انطلاق مهمته وبرغم تجريده من السلاح القانوني الأهم وهو تعديل المرسوم رقم 6433 تاريخ 1/10/2011 الذي يحدّد النقطة (23) كنقطة حدود ثلاثية في حين أن الوفد اللبناني انطلق من خط يعتمد النقطة (29) أي بزيادة 1430 كلم² عن الخط اللبناني المعلن بموجب المرسوم المذكور وبزيادة 2290 كلم² عن الخط المعلن من قبل العدو الإسرائيلي.

فوجيء وفد العدو الإسرائيلي بصلاصة الوفد اللبناني ودفاعه المحكم المستند كلاً إلى القانون الدولي، ولما لم يجد نفسه قادراً على مواجهته بالقانون شنّ حملة إعلامية شعواء بقصد تشويه صورة لبنان وتقليب المجتمع الدولي عليه وبصورة خاصة الوسيط الأميركي.

لم تُعقد الجولة الخامسة التي كانت مقرّرة بتاريخ 2/12/2020 واستعيض عنها بجولة قام بها الوسيط الأميركي على بعض القيادات

اللبنانية عرض خلالها العودة إلى التفاوض حول مساحة 860 كلم² لكن الجانب اللبناني أكدّ رغبته بمتابعة المفاوضات على أساس القانون الدولي دون حصرها بمساحة معيَّنة.

في ظل عدم تحديد موعد جديد للجولة الخامسة، اعتُبرت المفاوضات بحكم المعلّقة، فاستفاد العدو الإسرائيلي من ذلك لإعادة تنظيم صفوفه من خلال تحصين فريقه المفاوض بعد أن فهم جيّدًا موقف الوفد اللبناني، وأيضًا من خلال متابعة التحريض الدولي على لبنان.

نجح العدو الإسرائيلي في ذلك فأقدم السيد فريدريك هوف بنشر مقال له بتاريخ 4/12/2020 على موقع " نيوزلاين" شرح فيه بالتفصيل كيف وضع خطه في العام 2012 برضى الجانبين اللبناني والإسرائيلي وذكر إسميًا اللبنانيين الذين عملوا معه في تلك الفترة. طبعًا لم يكن هذا المقال بهذا التوقيت من باب الصدفة بل هدف منه تذكير اللبنانيين بأنهم سبق ووافقوا على المقترح الأميركي، وبالتالي دعم المزاعم الإسرائيلية القائلة بأن اللبنانيين غير ثابتين على رأي.

بعد فريدريك هوف، دخل وزير الخارجية الأميركي مايك بومبيو على الخط بتاريخ 22/12/2020 فدعا الجانبين للعودة إلى التفاوض على أساس الإدعاءات السابقة التي أودعوها الأمم المتحدة، أي بمعنى آخر العودة إلى التفاوض ضمن مساحة 860 كلم².

وجدت قيادة الجيش أن العدو الإسرائيلي يعتمد المماثلة والمراوغة فاقترحت تعديل المرسوم 6433 لتصبح النقطة الثلاثية هي النقطة (29) بدلًا من النقطة (23) وإيداع المرسوم الأمم المتحدة قبل بدء العدو الإسرائيلي استخراج النفط والغاز من حقل كاريش حيث من المتوقع بدء الإستخراج منه اعتبارًا من شهر حزيران/ يونيو المقبل، وبالتالي إجباره للعودة إلى طاولة المفاوضات تحت ضغط عاملي الوقت والالتزامات المادية نظرًا لارتباطه ببرنامج زمني مع شركتي شفرون ونوبل انيرجي، الأمر الذي قد يجبره على التنازل ويساعد الوفد اللبناني لتحقيق أقصى الممكن من الحقوق اللبنانية.

انتظرنا الردّ من العدو الإسرائيلي لكن للأسف برزت هجمة سياسية - إعلامية لبنانية، في سياق حملة بدأت بتاريخ 8/1/2020، يبدو أن مطلقها أخطأوا الهدف فبدل التصويب على العدو الإسرائيلي وجّهوا نيرانهم باتجاه الجيش اللبناني فشكّوا علنًا بالخط اللبناني الجديد واعتبروه خطأ إيرانيًا واتهموا الجيش اللبناني باختلاقه لخلق مزارع شبعًا بحرية ولدفع العدو الإسرائيلي لإيصال خطه إلى

قبالة صيدا.

ذنب قيادة الجيش أنها تحلّت بالجرأة فانطلقت من الخط الجديد (النقطة 29) لقناعتها بقانونية هذا الخط برغم معرفتها المسبقة بأن المهمة ستكون أصعب بسبب الأخطاء السابقة التي ارتكبتها عن قصد أو غير قصد بعض الذين تعاقبوا على هذا الملف منذ العام 2006.

فالخط الذي انطلق منه الوفد اللبناني ليس جديدًا بل هو نتيجة آراء ودراسات لبنانية وأجنبية وضعت بتصرف السلطات اللبنانية منذ العام 2011 ولكنها لم تأخذ بها لأسبابٍ ما تزال مجهولة حتى الآن ومطلوب من هذه السلطات شرحها للرأي العام اللبناني. أذكر من هذه الآراء والدراسات على سبيل المثال لا الحصر:

- مداخلات خلال جلسات لجنة الأشغال النيابية أثناء التحضير لإعداد القانون رقم 163 والمرسوم رقم 6433 قدّمها كل من وزير التربية الحالي القاضي طارق المجذوب (ممثل مجلس شوري الدولة حينها)، السفير جوني ابراهيم (ممثل وزارة الخارجية والمغتربين)، بالإضافة إلى محاضرة قدّمها الدكتور نبيل خليفة وجميعها تنادي بحق لبنان جنوب النقطة (23).
- دراسة قدمها مكتب الهيدروغرافيا البريطاني UKHO بتاريخ 17/8/2011 قبل يوم من إصدار القانون رقم 163 وقبل أسبوع من نشره في الجريدة الرسمية وقبل شهرين ونصف من إصدار المرسوم رقم 6433 يقترح فيها خيارين جنوب النقطة 23. (هل تم إخفاؤها عن النواب أم أنهم علموا بها وأهملوها؟).
- بحث أركان أعده العقيد الركن مازن بصبوص في العام 2013 عن الحدود البحرية بيّن فيه حق لبنان بمساحة 1430 كلم² جنوب النقطة (23).
- محاضرة ألقاها السيد نجيب مسيحي خلال مؤتمر أقامه مجلس النواب بتاريخ 18 و19/7/2019 أكد فيها على حق لبنان بمساحات إضافية جنوب النقطة 23.

كذلك فإن محاولات قيادة الجيش لتصحيح الخطأ ليست جديدة، فقد أرسلت مجموعة كتب إلى رئاسة الحكومة اللبنانية تقترح عليها تشكيل هيئة وطنية تعنى بموضوع الحدود البحرية وتلفت نظرها إلى وجود طرق أخرى تعتمد الحل المنصف وتعطي لبنان الحق بمساحات إضافية جنوب النقطة (23) دون الحصول على جواب سلبًا كان أم إيجابًا. أكتفي بذكر ستة من هذه الكتب:

- كتاب رقم 1993 / غ ع / و تاريخ 18-6-2013: على أثر متابعة مؤتمر في لندن حول الحدود البحرية. تم اقتراح إنشاء هيئة وطنية لاجراء دراسات واعتماد الحل المنصف بالاستفادة من الطرق التي اعتُمدت في دول أخرى (كان جواب الحكومة أن هذا الأمر خارج صلاحياتها كونها حكومة تصريف أعمال).
- كتاب رقم 3488/ غ ع / و تاريخ 3-9-2014: تأكيد على الكتاب السابق (كان جواب الحكومة أن لا ضرورة لإنشاء هيئة وطنية).
- كتاب رقم 1801 / غ ع / و تاريخ 12-4-2019: شرح أنه يمكن للبنان تعيين حدوده وفقاً للقوانين والأعراف الدولية بشكل يعطيه الحق بمساحات إضافية جنوب الخط المعلن بموجب المرسوم 6433 بحيث يقع جزء من حقل كاريش ضمن المياه اللبنانية. وطلب إثارة الموضوع في المحافل الدولية لمنع إسرائيل من متابعة العمل في حقل كاريش (بدأت إسرائيل الحفر في حقل كاريش بتاريخ 27 شباط/ فبراير 2020).
- كتاب رقم 10884/ غ ع / و تاريخ 7/11/2019: اقتراح تشكيل لجنة وطنية للبدء بالتحضير للمفاوضات المستقبلية خاصة أن الوقت أصبح داهماً أمامنا في ظل قيام العدو الإسرائيلي بتطوير حقل كاريش.
- كتاب رقم 5918 / غ ع / و تاريخ 27/12/2019: تم فيه التأكيد على حق لبنان بمساحة 1430 كلم² إضافية وأرفق الكتاب بملف كامل أعدته مصلحة الهيدروغرافيا في الجيش اللبناني.
- كتاب رقم 780 / غ ع / و تاريخ 9-3-2020: تأكيد على الكتاب رقم 5918 واقتراح التواصل مع المكتب البريطاني للحصول على المشورة نظراً لتوافر معطيات جديدة لمصلحة الهيدروغرافيا في الجيش اللبناني.

إن مهمة التفاوض هي مهمة وطنية بامتياز، والمحافظة على حقوقنا واجب وطني كونها ترتبط بمستقبل أولادنا وأحفادنا والتفريط بها خيانة وطنية. فأين المصلحة الوطنية باطلاق النار على الوفد اللبناني المفاوض وفي توقيت جاء استتباعاً لمواقف فريدريك هوف ومايك بومبيو؟ هل تعلمون أنكم بهجماتكم هذه تفتحون ثغرات في الجسم الدفاعي اللبناني قد يستغلها العدو الإسرائيلي للتسلل منها وتطويق الفريق اللبناني؟

تذكروا أنكم لاعبون ولستم متفرجين. البارحة رأيناكم تتصارعون على الصلاحيات فما بالكم اليوم تتراجعون أثناء تحمل المسؤولية؟ المطلوب منكم التحلي بالروح الوطنية العالية واتخاذ القرارات

الجريئة؟ إذا كنتم غير مقتنعين بخط الجيش اللبناني قولوا ذلك صراحة، إتخذوا القرار الذي تريدونه، وزوّدوا الفريق المفاوض بقراراتكم.

أما إذا كنتم مقتنعين، فعليكم تحصين موقف الوفد المفاوض بتعديل المرسوم 6433. لا يمكنكم أن تطلبوا منه التفاوض على النقطة 29 والرسوم رقم 6433 يحدّد النقطة 23. عدّلوا هذا المرسوم فوراً قبل أن يبدأ العدو الإسرائيلي بالاستخراج من حقل كاريش.

المطلوب تجنّب التجاذبات السياسية والمطلوب محاذرة الوقوع في الأزمة لا المساهمة في بلوغها أو الإنزلاق إليها.. التخاذل في هذا الموضوع جريمة بحق الوطن، بادروا بالتاريخ لن يرحم المتخاذلين، وإلا فلتبادر السلطة السياسية إلى سحب تفويضها للقيادة العسكرية.

Green Boom's Hottest Trade in 2021 May Turn Out to Be Utilities

(Bloomberg) – After a bumper year for Europe’s renewable-energy stocks, underappreciated utilities shares are now gaining support from the market as 2021’s hot sector to play the clean power transition.

Helped by government policies such as the European Union’s Green Deal and investors’ environmental, social and governance concerns, renewable assets have strongly outperformed traditional utilities peers this year in the Stoxx Europe 600 Index. Turbine maker Vestas Wind Systems A/S has almost doubled in value, while U.K. electric company SSE Plc is up less than 3%.

Some strategists warn that opportunities in wind and solar stocks may be more uneven in 2021 as valuations appear stretched. Utilities may be a lower-risk way to buy into green energy growth than renewables equities, said Ursula Tonkin, head of listed strategies at infrastructure investor Whitehelm Capital Pty Ltd.

“Over the long run, the tortoise will likely outperform the hare,” she said. “For every new solar, wind or battery installation, the grid has to expand to accommodate it.”

While coronavirus-pandemic winners such as tech shares are losing favor in the latest vaccine-fueled stock rally, sustainable companies have stayed in favor, also helped by November’s U.S. presidential election victory for Joe Biden, who pledged a clean-energy agenda. Still, utilities as a whole have gained only modestly so far this year.

Many utilities have positioned themselves to capitalize on opportunities in green energy after “cleaning up” their portfolios in the past few years, said Sam Arie, an analyst for the industry at UBS AG.

“We’ve gone from a world five years ago which didn’t really have climate goals in view to one where now those are the most important goals across all the sectors,” he said.

Investors will have to be more selective, with next year unlikely to be as “exceptional” as 2020 for the renewables segment, said Louise Dudley, a global equities portfolio manager at Federated Hermes Inc. Stocks such as Orsted A/S trade at about 53 times estimated earnings, versus 19 times for the Stoxx 600 Utilities Index. The Danish offshore wind-farm developer was recently downgraded at Bank of America Corp. and Royal Bank of Canada.

Investors are giving “insufficient credit” to utilities like SSE, Germany’s RWE AG, and Portugal’s EDP SA that balance spending on renewables with defensive earnings flow from electricity networks, RBC Capital analysts said in a 2021 outlook note for the utilities sector. Analysts tracked by Bloomberg see 16% upside for RWE and 6% for EDP, while average price targets are for at least 11% declines for Vestas and peer Siemens Gamesa Renewable Energy SA.

Another plus is attractive payouts. Investors would struggle to find another industry that delivers utilities’ highly predictable, strong earnings growth alongside comparatively high dividend yields, UBS’s Arie said.

Still, while 2021 may involve a “bumpier ride” for renewables, valuations for Vestas, Orsted and peers aren’t likely to slide as their business growth forecasts are so positive, Whitehelm Capital’s Tonkin said.

Green Competition

An additional concern for the pure renewables industry in 2021 is increasing competition, both from utilities ramping up spending and oil companies aggressively investing in green energy. This could pose a “real threat” to the economics of wind and solar, said Ulrik Fugmann, co-head of the Environmental Strategies Group at BNP Paribas Asset Management.

Others, however, are sanguine. James Smith, fund manager at

the Premier Miton Global Renewables Trust, said oil companies that “seek projects simply for the sake of it” would put returns at risk at a time when the sector must strike a balance between operating core crude-oil assets, executing the shift to renewables and paying dividends.

The energy market “needs to grow very aggressively in the next two decades” to reach regulators’ emission-cutting goals, said Harry Boyle, a portfolio specialist at sustainability-focused fund manager Impax Asset Management. “There should be ample room for all actors.”

**How Brexit talks overcame
suspicion, resentment and
fish**

It was always likely to come down to fish, and even the final hours were occupied by cod and mackerel.

After nine months of bartering, British Prime Minister Boris Johnson could declare that his trade deal with the European Union was done, while the bloc got to keep close ties with one of the world's biggest economies.

Yet, while the outline was agreed around Wednesday lunchtime, it took a night to go through the legal text. Then, with the choreography already in place, last-minute haggling over fish stocks in the draft meant that an announcement didn't come until the afternoon of Christmas Eve. The situation became more frantic because of disagreements over how the figures had been calculated.

For about 200 officials agonizing over the minutiae, it was time to finally emerge from the darkness. They spent more than 2,000 hours shut in rooms with little or no natural light as negotiators confronted each other in London and Brussels while Brexit was overshadowed by the human and economic cost of the

coronavirus pandemic.

Some learned to respect their opposite numbers, others grew to resent them. At times, mutual suspicion and paranoia over listening devices made Brexit look like a chapter from the Cold War, all heightened by COVID-19 restrictions. Intimate chats in cafes were out; liaisons in parks were in. One British diplomat called it “Brexit noir.”

France’s blocking of the U.K.’s biggest port before Christmas was ostensibly to prevent a new strain of the coronavirus spreading to the continent. Yet there was also the sense in Paris that the chaos that halted thousands of trucks would demonstrate to the U.K. what was at stake. Officials said the two-day stoppage had focused the minds on what the EU’s chief negotiator, Michel Barnier, termed the “final push.”

For the negotiating teams, it was just another twist after spending the greater part of 2020 poring over air cargo, fingerprint data and – critically – 100 different fish species. One official described the process as like “pulling out eyelashes, one by one.”

They lived out of suitcases, working through two waves of infections that forced many into isolation. On occasions, tears were shed when they thought they were about to fail, even as recently as the morning of the deal. In the end, many were airlifted out of Brussels on a Royal Air Force plane to get home for Christmas.

This account of how the talks unfolded is based on conversations with officials with intimate knowledge of what went on. All of them asked not to be identified.

While the outcome brought celebration and relief as the final deal took shape, it had looked very different on Dec. 10. In a third-floor conference room in the British government’s building in Brussels, British lead negotiator David Frost told his team a deal looked almost impossible. Johnson was warning

his country that failure looked likely.

The evening before, on Dec. 9, a dinner meeting on the 13th floor of the European Commission's Berlaymont headquarters in Brussels between Johnson and Commission President Ursula von der Leyen hadn't gone to plan. After she warned him publicly to "keep distance" when they took their face masks off, they found themselves wrangling over the same points that had bogged down the negotiations since the start.

At one point, von der Leyen's aides showed Johnson a PowerPoint slide that the EU had published in February. It showed how close the U.K. is to Europe geographically and how much the two sides trade with each other, to explain why the EU insisted on fair competition rules in any deal.

But the U.K. had already dismissed the chart at the start of the year. To the people close to the negotiations, it felt like they were back at square one.

"We were numb," said one U.K. official after Frost briefed them the following morning. Another fought back tears. "We just wanted to know when we could go home and see our families," the official said.

As it looked like their efforts had come to nothing, the British negotiating team distracted themselves by challenging each other to come up with the best haiku. But the dinner at least had shown more clearly where the differences lay – helped in some small part by the menu of scallops and turbot – and Johnson and von der Leyen were now in charge.

Compromises were found on one of the longstanding sticking points: the level playing field for fair competition, or rules to ensure neither side held a post-Brexit advantage for companies. The U.K. knew a deal was attainable if it backed down on some of its objections to the EU being able to impose tariffs if Britain does not follow the bloc's toughening of labor, social and environmental standards.

But the U.K. wanted something in return. The final days came down mainly to the fishing rights in British waters. Johnson and von der Leyen held further phone calls and, although officials said they still seemed to be talking across each other, on the ground the sides started to converge.

On Dec. 19, the prime minister was preparing to announce to the nation that he was taking drastic action to lock down London and ban Christmas gatherings because of a new highly virulent coronavirus strain. He also signaled to Frost that the time had come to do a deal.

As talks focused in on the issue of fishing rights, British negotiators were taken aback that the EU wasn't budging as much as they thought it would, and by the following night things looked bleak again.

In an attempt to get the deal over the line, Johnson and von der Leyen held two tense phone calls Monday. The Commission president said the EU, particularly France, wouldn't accept anything more than a 25% reduction in the amount of fish it could catch in British waters – and that this was the final offer.

Johnson had been pushing for 80%, though had just proposed 30%, a figure that might already be difficult to sell to his party in Parliament. Both sides were now feeling nervous about the prospects of a deal before Christmas, and when Johnson and von der Leyen spoke on Tuesday afternoon, they were still sticking to their guns.

That all changed on Tuesday night. After frantic phone calls between Brussels, Paris and Berlin, the EU came through with a new offer: Von der Leyen's Brexit adviser, Stephanie Riso, called Frost and told him the bloc would drop its longstanding demand that it should be able to impose far-reaching tariffs on the U.K. should it restrict fish access in the future, a power known as cross-retaliation.

That was the final piece of the jigsaw. The U.K.'s top team sent urgent messages to their colleagues, some of whom were already back at their Brussels hotel packing their suitcases to go home for Christmas. They got down to work on fishing rights immediately and worked late Tuesday night.

By Wednesday, when Johnson and von der Leyen spoke again – four times that day – the outline of a deal was there. In return for the dropping of cross-retaliation, Johnson accepted a reduction of 25% on fishing, with a five-and-a-half-year transition period. That means that he can say that in June 2026, on the 10th anniversary of the EU referendum, the U.K. will have full control of its waters.

“This moment marks the end of a long voyage,” von der Leyen told a news conference in Brussels on Thursday. “At the end of such voyages, I normally feel joy. But today I feel satisfaction and relief. It’s time to leave Brexit behind.”

The most recent leg of that journey started in March, but made little progress until after the summer. The coronavirus pandemic derailed arrangements almost immediately.

Shortly after the first negotiating round, several members of the two teams, including Frost and Barnier, were laid low either because they tested positive or were displaying symptoms. They continued talks over videoconference, though couldn’t meet in person again until the end of June.

That meant negotiators couldn’t strike up a rapport. “There were no handshakes, no gentle pats on the back, no opportunity to chat things over informally over a drink,” said one EU official. “That’s how deals are normally done.”

Intimacy came in the form of web cameras into people’s homes. One EU negotiator worked from a blood-red room with a bird cage, while a British official spoke from his shed in the English Midlands. Another from the U.K. sat in her kitchen between a bouquet of lilies and a set of knives. “It was

perfect for her,” one person involved in the talks joked.

There were technical problems with video technology, and both sides were worried about the security of discussing sensitive issues online. Officials found it difficult to work jointly on documents.

When they did resume face-to-face contact, the British side tried to win Barnier over. Over the summer, Frost wooed the Frenchman during private dinners at Carlton Gardens, an elegant 19th century London townhouse carefully chosen because of the emotions it might stir. The building served as the headquarters of the “Free France” government in exile during World War II led by Charles de Gaulle, Barnier’s political hero – though also the French leader who vetoed Britain’s membership of the EU’s precursor.

Months went by in almost constant deadlock, though. Barnier told Frost that before going into a submarine you need to make sure the doors are firmly shut, in response to Frost’s requests to intensify negotiations. As one negotiator put it: “There’s only so many times you can tell each other exactly the same thing about fish without going slightly crazy.”

The coronavirus weighed on the talks almost from the start. The revised train timetable under the English Channel meant there was only one shuttle to Brussels in the morning and one to London at night. Lockdowns closed bars and restaurants, and officials were forced to eat tepid dinners dropped off in paper bags alone in their hotel rooms for days on end.

In November, Barnier worked at home by candlelight after a power cut affected part of Brussels while he was in quarantine after one of his team tested positive for COVID-19.

Indeed, darkness became a theme of the talks. In London, they took place in an underground conference center belonging to the U.K. government’s business department dubbed “The Cave.” In Brussels, meetings in the drab 1970s-style Borschette

center took place from early morning to late at night. Starved of fresh air and exercise, negotiators started sharing vitamin D pills.

And with darkness came the sense of noir. During the first set of Brexit negotiations in 2018, the EU's trade supremo, Sabine Weyand, told attaches of her concern they were being bugged by the British secret service, something the U.K. flatly denied. Two years on, that paranoia persisted, an EU diplomat said. Johnson and his aides were asked to surrender their phones when they met von der Leyen for dinner.

Brussels officials in normal times might have allowed trusted journalists into their offices to view documents too sensitive to email. Now, they hid print-outs in the pages of the *Le Soir* newspaper as they sipped takeaway coffees on street corners.

While nervousness extended to both sides, key decision-making was taking place elsewhere anyway. Johnson exchanged text messages with French President Emmanuel Macron. Frost was in regular contact with Uwe Corsepius, German Chancellor Angela Merkel's top adviser.

For all the hours together, the two sides spent most of the time talking past each other. Even when Johnson and von der Leyen spoke again on the phone, officials said it sounded like they were talking from completely different positions.

The reasons for Brexit were something many on the EU side struggled to understand. While "sovereignty" became the U.K.'s mantra throughout the nine months, it was a running joke among the EU negotiators. Whenever Frost tweeted the word, they expected little to be achieved for the next few days.

In her speech Thursday, von der Leyen pointedly remarked that everyone should ask themselves what sovereignty actually means in the 21st century.

At various times, the talks were very close to collapse, not

least when the British government threatened to break international law by unpicking part of the withdrawal agreement on leaving the EU. But the EU saw the move as just provocation. It was clear that, despite everything, both sides desperately wanted a deal.

Indeed, they always returned to the table. As it became closer to Christmas, and the end of the U.K.'s post-Brexit transition period, tensions increased. British officials said they observed cross words between Barnier and senior members of the EU team. Witnesses reported hearing shouting from the U.K. team's base in London.

Asked how they planned to celebrate the deal, one member of the British group already knew: "I'm going to sleep."
